Feasibility for Managed Aquifer Recharge Project in the Kaushambi–Fatehpur–Kanpur Region

1. Background

In reference to the Heliborne Geophysical Survey carried out under an NMCG-funded project, the National Geophysical Research Institute (NGRI) delineated granular aquifer zones suitable for Managed Aquifer Recharge (MAR) at **different depth intervals** ranging from 0 to 200 m below ground level (mbgl) covering nearly 8000 sq km in parts of the districts of Kanpur Dehat, Kanpur Nagar, Fatehpur, and Kaushambi. Based on the interpretation of heliborne geophysical data, NGRI identified and proposed 1,134 potential recharge locations for the construction of recharge pits with recharge wells.

In this regard, a meeting was held under Chairmanship of Director General, NMCG, with the Central Ground Water Board wherein it was desired that; Can CGWB get these recharge sites constructed with the proposed recharge structure at the identified locations? During the discussion Regional Director, CGWB, NR, assured that CGWB will carry out field verification of sites suggested by NGRI prior to proceeding with the recommendation for construction of type of recharge structures.

Subsequently, five officers were deployed to carry out field verification of the proposed sites located in parts of districts of Kanpur Dehat, Kanpur Nagar, Fatehpur, and Kaushambi.

2. Ground Verification of NGRI-Proposed MAR Sites

During the field verification, it was observed that, out of 1,134 locations proposed by NGRI**,** only **11 locations** were found feasible for artificial recharge with respect to location and ground condition such as government land and runoff availability. The remaining sites were found unsuitable as they were located on roads, agricultural fields, private houses in villages, absence of sufficient runoff, technically not viable for construction of recharge structures. The site-wise details of sites verified by CGWB are given in ***Annexure-I***.

During the study carried out by National Geophysical Research Institute (NGRI), they have conducted a Heliborne Transient Electromagnetic (HTEM) survey over the Kaushambi–Kanpur stretch, covering an area of approximately 8,000 km². The survey provided high-resolution subsurface resistivity information, enabling characterization of aquifer geometry, lithological variations, and buried fluvial systems. Based on resistivity contrasts, the subsurface was interpreted into distinct sand and clay zones / lenses at various depths.

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)
Generated from eOffice by PEEYUSH GUPTA, ARTIS(PG)-GIS, ARTIS, NATIONAL MISSION FOR CLEAN GANGA on 30/10/2026 10:12 am

Subsequently, NGRI has suggested 1134 locations for construction of recharge structure for MAR. On field verification and technical evaluation of sites it appeared that NGRI has carried out simply a desktop exercise without assessing hydrogeological parameters and suitability. CGWB, after assessing hydrogeological parameters, found that out of 1134 locations only 01 site selected by NGRI is feasible for MAR. Therefore, CGWB has initiated to find alternative suitable MAR sites considering suitable hydrogeological characteristics for recharge to ground water.

3. Identification of Alternate MAR Sites

In order to achieve the objective of Managed Aquifer Recharge (MAR) and aquifer augmentation within the identified area, an initial inventory of 154 potential sites was prepared by the field officers of CGWB, Northern Region. Based on geophysical investigations, hydrogeological and technical evaluations, the number of potential sites was progressively reduced to 47 sites.

4. Technical Evaluation for Recharge feasibility

For technical evaluation and assessing the recharge feasibility these 47 locations were subjected to verification and technical validation on the basis of following criteria:

i. Topography & physiography of the locations
ii. Groundwater Level conditions
iii. Decadal ground water level trend analysis
iv. Hydrogeological Suitability
v. Surface runoff availability
vi. Ground Water Quality consideration

4.1. Topography and Physiography of location.

4.2 Groundwater Level Conditions

Post-monsoon groundwater levels were evaluated to ensure that the depth to ground water level is more than **8 m below ground level (mbgl)**, thereby providing adequate unsaturated storage for recharge and prevents water logging conditions in future. **Fig. 1** depicts the ground water levels during post monsoon period of 2025, wherein around 71% area is showing ground water levels more than 8 m bgl and rest 29% area is showing ground water levels less than 8 m bgl.

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)

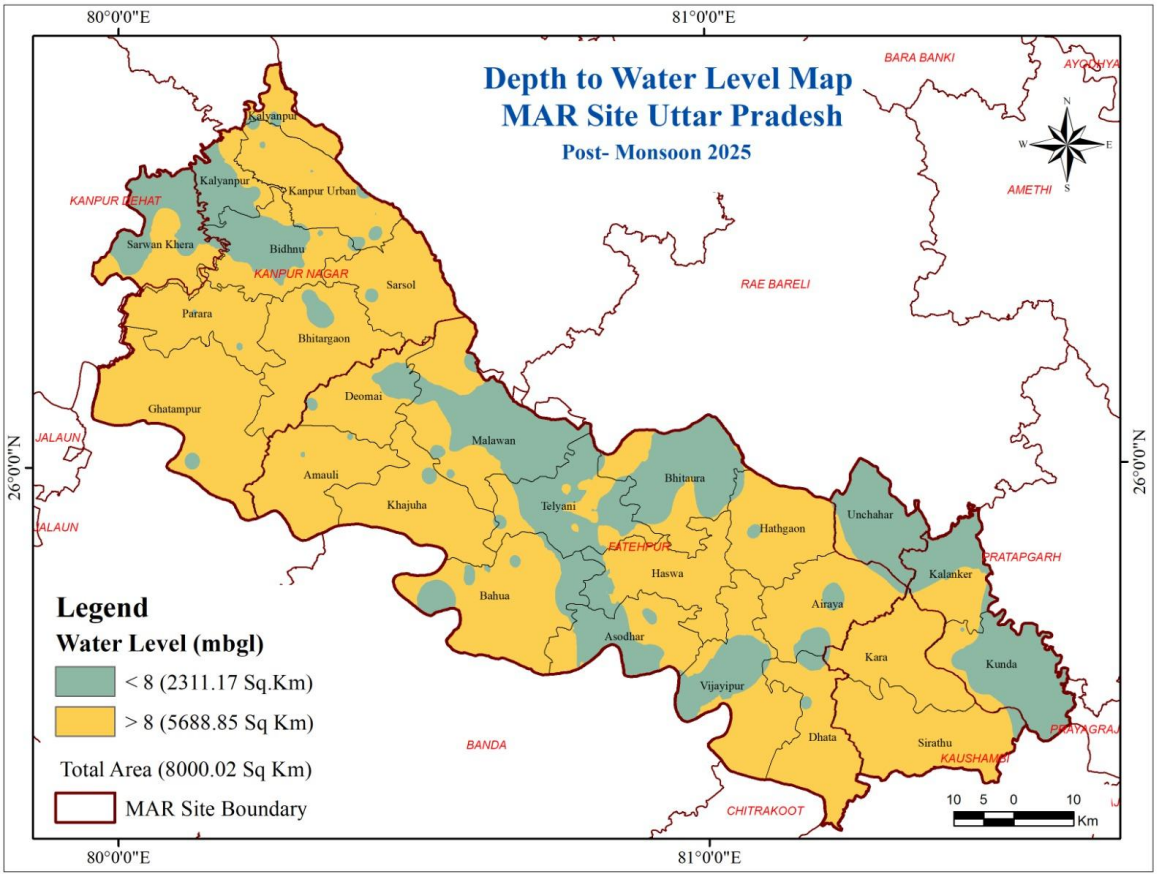

Fig.1: Depth to ground water level during post monsoon 2025

The table given below are prime most criterion for suitability for MAR with respect to post monsoon depth to ground water levels.

Table 1: MAR Suitability based on Depth to Ground Water Levels

DTWL	MAR Suitability	Remarks
Less than 8 mbgl	Poor Suitability	Limited storage; recharge to aquifers may lead to waterlogging in future.
More than 8 mbgl	Suitable.	Adequate unsaturated storage available; favourable for recharge if aquifer characteristics are suitable.

4.3 Decadal Groundwater Level Trend Analysis

Decadal ground water level trends (2016-25) of the study area were considered for delineating areas with rising and falling ground water level trends. This analysis has identified areas experiencing declining groundwater levels, where recharge interventions are required to

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)
Generated from eOffice by PEEYUSH GUPTA, ARTIS(PG)-GIS, ARTIS, NATIONAL MISSION FOR CLEAN GANGA on 30/10/2026 10:12 am

arrest declining ground water levels. Based on the decadal trends, area suitable for ground water recharge are demarcated and is given at **Fig. 2.**

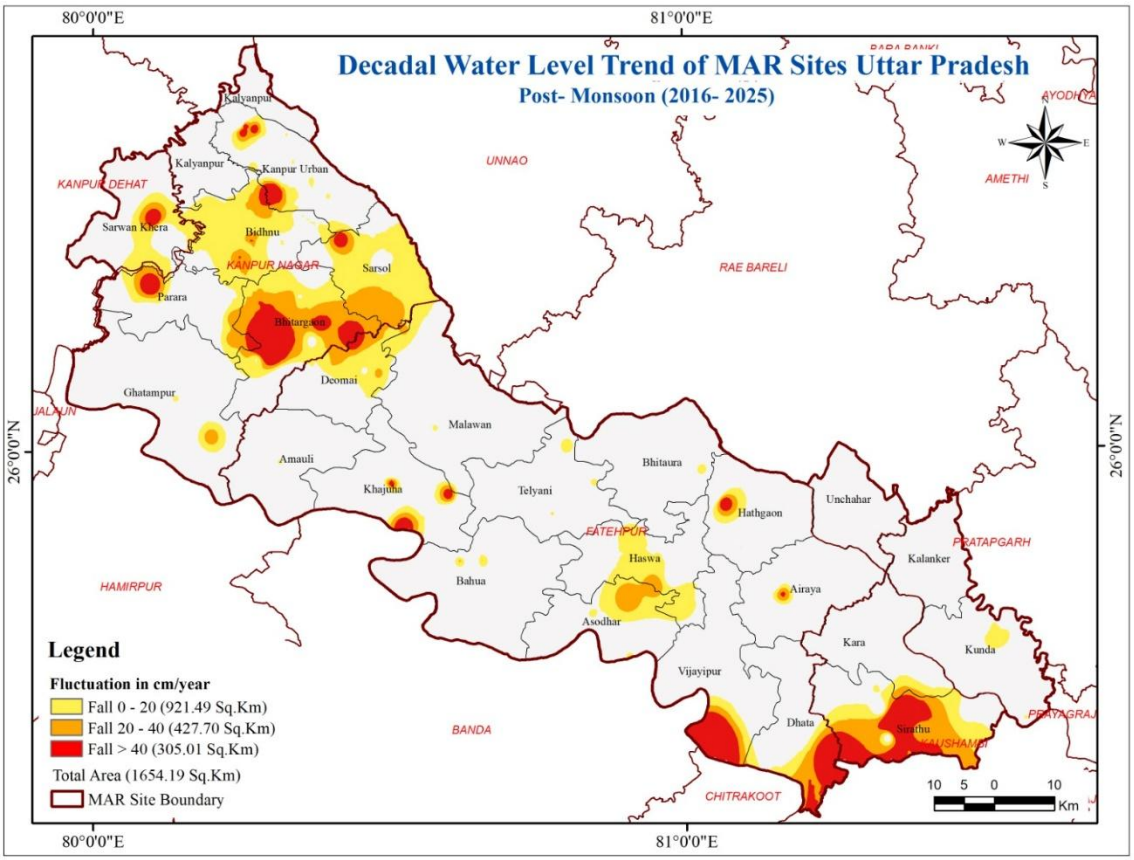

Fig.2: Area suitable for ground water recharge based on Decadal trends (2016-2025)

The decadal post-monsoon groundwater level trend (2016–2025) reveals that groundwater level decline is confined to localized pockets within the MAR study area, whereas the remaining area exhibits rising groundwater levels trends. Severe declines (>40 cm/year) are concentrated in parts of Kanpur Nagar and southern Kaushambi, with moderate declines occurring in isolated areas of Fatehpur. These declining zones represent priority areas for Managed Aquifer Recharge (MAR), as recharge interventions can help arrest the long-term depletion trend and enhance groundwater sustainability.

Combined Analysis of Depth to Water Level and Decadal Water Level Trend

The integrated analysis of post-monsoon depth to ground water levels and decadal groundwater level trend was carried out to identify priority areas for Managed Aquifer Recharge (MAR). Areas satisfying both criteria, were considered hydrogeologically favourable for recharge

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)
Generated from eOffice by PEEYUSH GUPTA, ARTIS(PG)-GIS, ARTIS, NATIONAL MISSION FOR CLEAN GANGA on 30/10/2026 10:12 am

interventions. The analysis indicates that the highest priority MAR zones are concentrated in the following pockets:

- Bhitargaon–Bidhnu–Parara region of Kanpur Nagar, where deep groundwater levels coincide with moderate to severe groundwater level decline.
- Part of Sirathu–Dhata blocks of Kaushambi, which exhibits extensive groundwater depletion along with sufficient unsaturated aquifer thickness for recharge.
- Localized pockets around Haswa and Hathgaon in Fatehpur, where moderate groundwater decline overlaps with deep post-monsoon water levels.

Conversely, areas having depth to water level less than 8 mbgl, despite showing groundwater level decline, were assigned lower priority because of limited available storage within the unsaturated zone. Similarly, areas with depth to water level greater than 8 mbgl but stable or rising groundwater levels were not considered immediate priority for MAR, although they may be suitable for recharge from a long-term groundwater management perspective.

The integrated assessment effectively delineates **priority recharge zones** where both groundwater stress and adequate storage potential coexist. The criterion is given in **table 2** and integrated map ofof DTW and trends for prioritising MAR sites is given at **Fig. 3.** Based on this analysis around **1413 sq km** area is identified suitable for ground water recharge wherein 41 MAR sites were identified for recharge.

Table 2: Key Criteria for Site Selection

Criteria	Interpretation	Priority for MAR
DTWL > 8 m + Falling water level	High groundwater stress with adequate storage	**Very High**
DTWL > 8 m + Stable/Rising water level	Adequate storage but no significant depletion	Moderate
DTWL < 8 m + Falling water level	Groundwater decline but limited storage	Moderate to Low
DTWL < 8 m + Stable/Rising water level	Low groundwater stress and limited storage	Low

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)

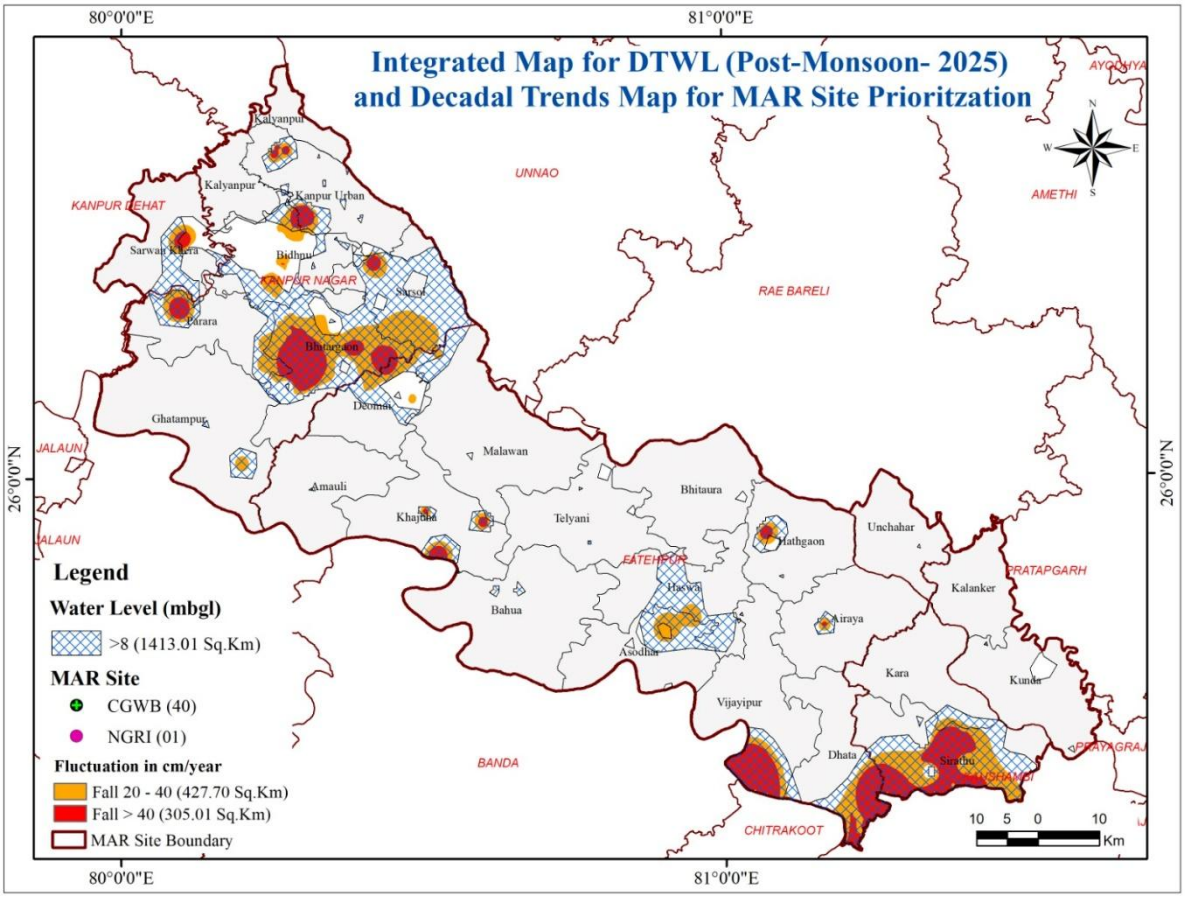

Fig.3: Integrated map of DTW & trends for prioritising MAR sites

4.5 Hydrogeological Suitability

The study area is characterised by alternate lenses of sand and clay sequences which is forming an unconfined aquifer system in the area. CGWB preliminarily identified 154 nos. of alternate sites based on the criteria of availability of government land for the implementation of MAR structures. These sites were further evaluated on criteria like decadal groundwater level trends and post-monsoon groundwater level, surface runoff availability etc. The specific component taken into consideration for selecting MAR sites are w.r.t long term trends of declining groundwater levels and a depth to water level greater than 8 m bgl. After technical evaluation and validation, about 1413 sq.km. area has been identified as suitable for MAR. There are areas with more than 8 m bgl ground water levels but decadal ground water levels are showing rising trends, have not been considered for selection of MAR sites.

Based on these above-mentioned criteria, 154 sites were shortlisted as suitable for MAR. Subsequently, the shortlisted sites evaluated on heliborne geophysical data to ascertain presence

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)
Generated from eOffice by PEEYUSH GUPTA, ARTIS(PG)-GIS, ARTIS, NATIONAL MISSION FOR CLEAN GANGA on 30/10/2026 10:12 am

of granular (sand)/ aquifer zones which are desaturated. This integrated analysis has identified 47 **sites as technically suitable for MAR**. The details of such sites are given in ***Annexure-II.***

Based on the entire area ground water flow has also been determined and is given at **Fig. 4.** The ground water flow is indicative that recharge to ground water in the area, identified as suitable for MAR will contribute to lean season flow of Rive Ganga as well as Yamuna depending upon flow.

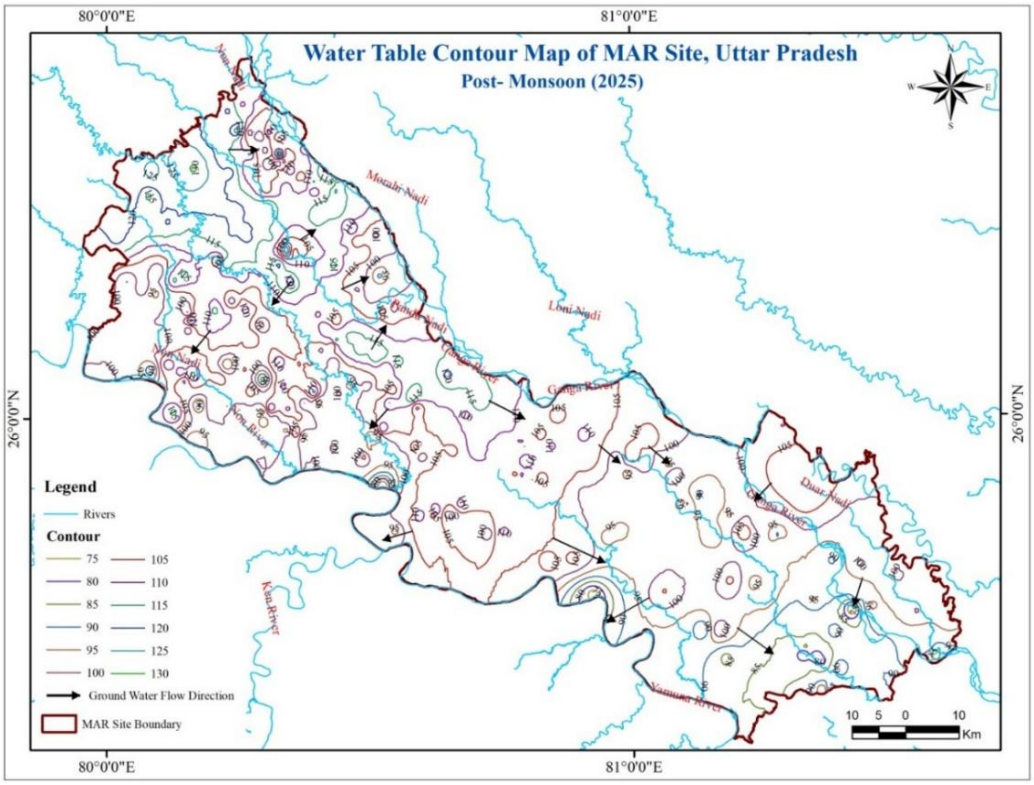

Fig. 4: Ground Water Flow in Study area

Further, ground water quality analysis has also been undertaken to assess the quality of ground water in the subsurface aquifers. The area is already under natural recharge and return seepage from irrigation since inception and so far, no significant deterioration in ground water quality due to irrigation return seepage from agriculture land has been observed. The ground water quality of the study area is given at **Fig. 5.**

On perusal of dynamic ground water resources 2025 of the area it is observed that one assessment unit is under overexploited category which is located in Kanpur Urban area and having industrial clusters. One assessment unit is Critical, and 10 assessment units falls in Semi-critical category. Rest 14 assessment units are safe in respect of stage of ground water extraction.

Table 3: Categorisation of Assessment Units in Study area.

S.No.	District	Assessment Unit	Stage of Ground Water Extraction (%)	Categorization
1	KANPUR NAGAR	GHATAMPUR	87.58	Semi Critical
2	KANPUR NAGAR	SARSAUL	84.21	Semi Critical
3	KANPUR NAGAR	Bhitargaon	59.35	Safe
4	KANPUR NAGAR	PATARA	61.04	Safe
5	KANPUR NAGAR	BIDHNOO	87.84	Semi Critical
6	KANPUR NAGAR	Kanpur City	101.66	Over Exploited
7	KANPUR NAGAR	KALYANPUR	56.93	Safe
8	KANPUR DEHAT	SARVAN KHERA	79.03	Semi Critical
9	FATEHPUR	AMAULI	69.29	Safe
10	FATEHPUR	BHITAURA	99.72	Critical
11	FATEHPUR	DEMAI	69.74	Safe
12	FATEHPUR	DHATA	67.51	Safe
13	FATEHPUR	ASOTHER	61.62	Safe
14	FATEHPUR	VIJAYEEPUR	67.44	Safe
15	FATEHPUR	AIRAYAN	76.22	Semi Critical
16	FATEHPUR	BAHUA	57.78	Safe
17	FATEHPUR	HASWA	69.37	Safe
18	FATEHPUR	HATHGAON	57.37	Safe
19	FATEHPUR	TELIYANI	75.67	Semi Critical
20	FATEHPUR	KHUAJUHA	75.30	Semi Critical
21	FATEHPUR	MALWAN	68.52	Safe
22	PRATAPGARH	KALAKANKER	62.46	Safe
23	PRATAPGARH	KUNDA	68.54	Safe
24	KAUSHAMBI	SIRATHU	77.35	Semi Critical
25	KAUSHAMBI	KARA	89.49	Semi Critical
26	RAIBARELI	UNCHAHAR	56.67	Safe

Based on the above technical evaluation, **33 locations** satisfying all the prescribed criteria were considered suitable for Managed Aquifer Recharge. Emphasis has been given to areas exhibiting declining groundwater level trends (approximately 0–40 cm/year), as these are expected to derive greater benefit from Managed Aquifer Recharge (MAR) interventions.

4.6 Surface Runoff Availability

Rainfall analysis, catchment delineation, and runoff estimation were carried out to assess the availability of runoff and quantum of potential recharge that can take place if recharge structures are executed in the identified area. Total of about **51 MCM of monsoon runoff** is expected to be generated at selected locations to augment unconfined aquifers.

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)
Generated from eOffice by PEEYUSH GUPTA, ARTIS(PG)-GIS, ARTIS, NATIONAL MISSION FOR CLEAN GANGA on 30/10/2026 10:12 am

5. Alternate Managed Aquifer Recharge (MAR) Sites

The selected alternate MAR sites are concentrated within the Kanpur Nagar region, particularly around Bhitargaon, Baragaon, Parara, Sarsaul and adjoining areas, where moderate to severe groundwater level decline coincides with favourable hydrogeological conditions. Additional clusters of selected sites are in Haswa, Hathgaon, Vijeeypur and Bahua blocks of Fatehpur, representing localized groundwater stress zones suitable for recharge interventions. Kaushambi district in north of Yamuna River, exhibits the most extensive groundwater depletion in the study area, attributes to marginal alluvium of 30 to 40 m thickness underlain by hard rock formation. The single NGRI-proposed site suitable for artificial recharge is located in Bahua Block of Fatehpur district. Although, it lies outside the major groundwater depletion zones, hydrogeological investigations indicate favorable subsurface conditions for recharge, making it viable for MAR.

6. Selection of Recharge Structure

Suitable Managed Aquifer Recharge (MAR) structures, including desilting and renovation of ponds, rooftop rainwater harvesting (RTRWH), check dams, nala bunds, and recharge pits, can be proposed based on landscape patterns, availability of government land, ground slopes criteria and catchment characteristics. Priority is given to sites located on Government land so that implementation gets facilitated. This would help to obtain No Objection Certificates (NOCs) from the respective Government authorities. In this region some restriction for recharging the surface runoff from agricultural field have been imposed through "Uttar Pradesh Ground Water (Management and Regulation) Act, 2019". The Provisions of Section 28 of the Act are as follows:

- ***Prohibition on Direct Recharge (Sub-section 1):*** *Rainwater falling on open land, the ground, paved or unpaved roads, and* ***agricultural farms cannot be used for direct artificial recharging*** *into aquifers. This restriction applies to systems like recharge wells, bore wells, recharge shafts, and injection wells.*
- ***Rooftop Exception:*** *Rainwater harvesting collected strictly from rooftops is exempt from this specific ban on direct recharging.*
- ***Penalties (Sub-section 2):*** *Any person who violates this rule is subject to punishment under Section 39(2) of the Act. [1]*

7. Final Recommended MAR Sites

Ponds & Lakes with suitable recharge structures and Check Dams

Following detailed secondary field verification, assessment of subsurface aquifer potential, evaluation of hydrogeological conditions, technical feasibility, identification of suitable government land, and selection of appropriate recharge structures, the final number of feasible sites for MAR is finalized as **47 (Annexure-II)**. Out of these 47 sites, **33 sites** (ponds and lakes) are being selected for renovation/construction with suitable recharge structures, and **14 sites** are selected for check dams on the River Rind. The location map of these 47 sites is given in **Fig.7** and the details are attached in the **Annexure-II** along with photographs in **Annexure-III.**

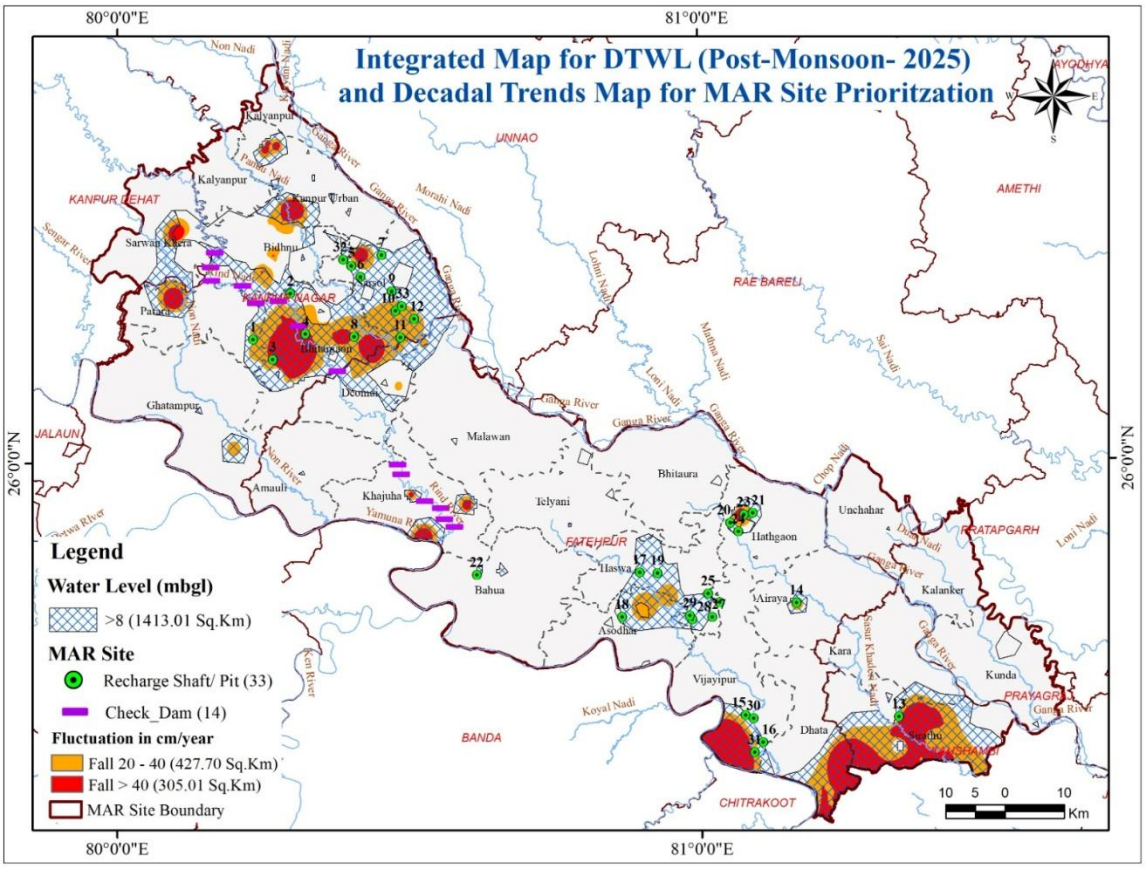

Fig. 7: Location map of the 47 feasible sites proposed for MAR

8. Proposed Managed Aquifer Recharge (MAR) Structure Designs

Keping in view the consideration of the section 28 of the Act, indirect recharge through meticulously designed recharge pits have been determined. To do this farm ponds, conventional roof top rainwater harvesting systems along with recharge structures like Check Dams are under consideration in location specific manner. It is further to clarify that these designs are based on the

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)
Generated from eOffice by PEEYUSH GUPTA, ARTIS(PG)-GIS, ARTIS, NATIONAL MISSION FOR CLEAN GANGA on 30/10/2026 10:12 am

hydrogeological investigations, geophysical surveys, declining groundwater level conditions, surface runoff availability, and site-specific engineering considerations. Appropriate Managed Aquifer Recharge (MAR) structures have been proposed for the selected sites.

Finally, two design alternatives for farm pond recharge have been proposed to implement on ground as below and additionally construction of check dams have also been proposed:

i. Recharge Pit Installed within Existing Pond:

In this design, the recharge pit is constructed entirely within the pond bed. During normal conditions, the pond functions as a conventional water storage structure. When the water level exceeds the designated threshold (approximately 1.0 m), excess water enters the recharge pit through the inlet and percolates through graded filter media comprising pebbles, gravel, coarse sand, and boulders before infiltrating into the underlying aquifer. A sample design of pond recharge within the pond is given at **Fig 8.** This arrangement maximizes utilization of stored pond water while minimizing silt entry into the recharge system.

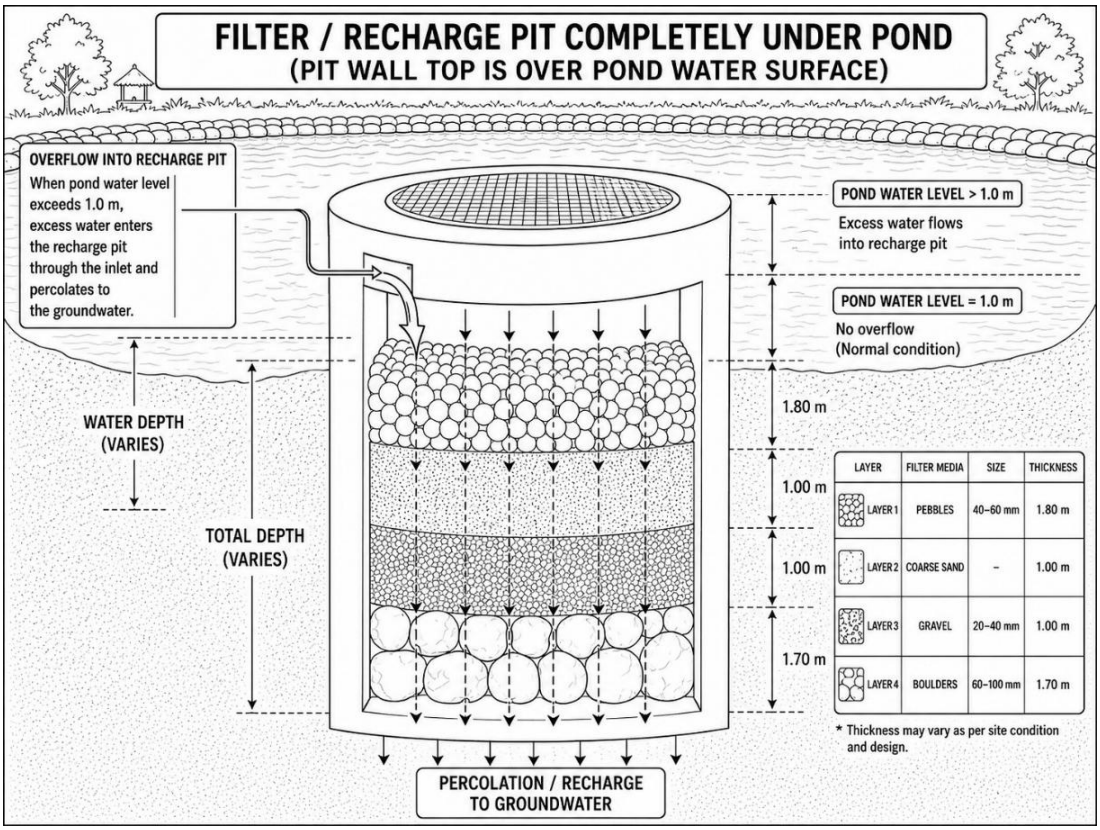

Fig. 8: Schematic diagram of recharge pit within the pond for ground water recharge

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)
Generated from eOffice by PEEYUSH GUPTA, ARTIS(PG)-GIS, ARTIS, NATIONAL MISSION FOR CLEAN GANGA on 30/10/2026 10:12 am

ii. Pond–Filter Chamber–Recharge Pit System:

This design incorporates a separate filter chamber between the pond and the recharge pit. Pond water first passes through the filter chamber containing graded filter media, which removes suspended sediments and improves water quality before entering the recharge pit. The filtered water subsequently infiltrates through the recharge pit into the aquifer. This configuration is particularly suitable where pond water contains higher suspended sediment loads and long-term maintenance of recharge efficiency is required. A sample design of pond recharge outside the pond is given at **Fig 9.**

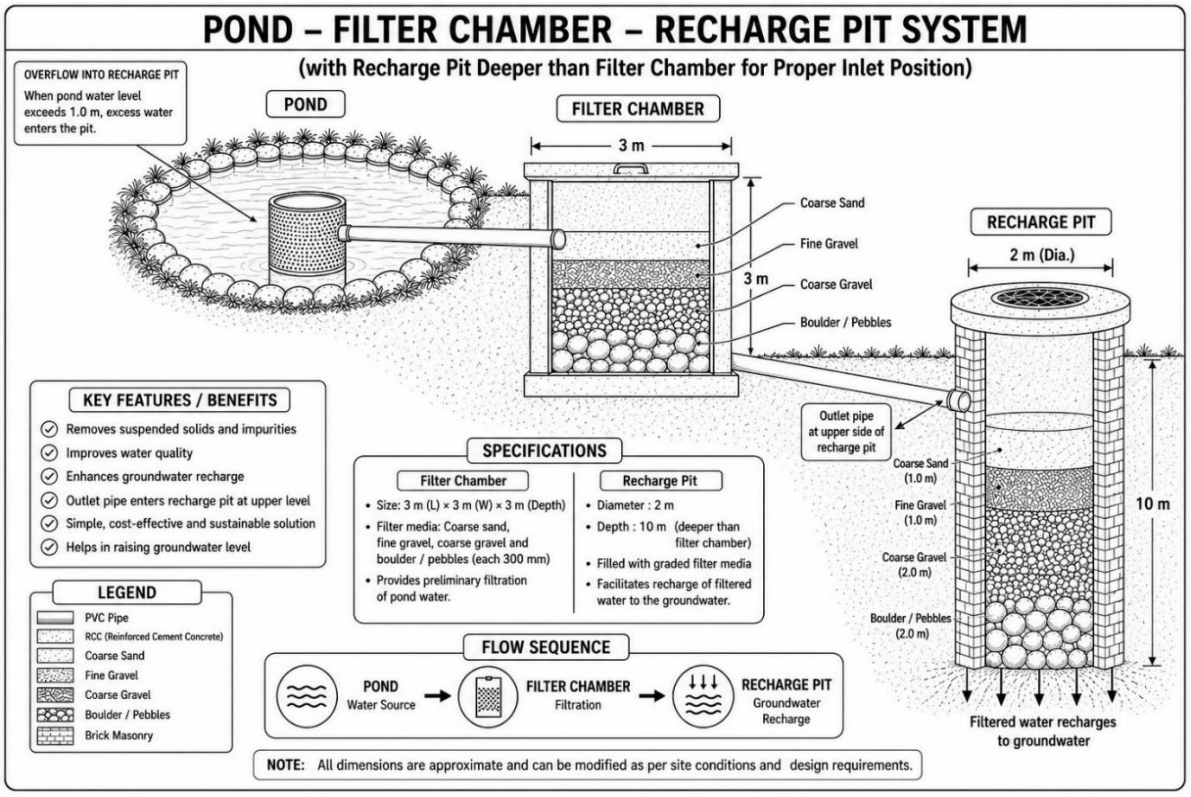

Fig. 9: Schematic diagram of recharge pit outside the pond for ground water recharge

The recharge pits are proposed with graded filter media consisting of coarse sand, fine gravel, coarse gravel, pebbles, and boulders, with dimensions and filter thicknesses to be finalized during detailed engineering design based on site-specific hydrogeological and geotechnical conditions. Similarly, the dimensions of filter chambers, recharge pits, and associated inlet and outlet arrangements may be modified depending upon runoff availability, pond geometry, soil characteristics, and aquifer properties.

File No. TE-16018/1/2020-O/o AD(RD Tech) NMCG-NATIONAL MISSION FOR CLEAN GANGA (Computer No. 259380)
Generated from eOffice by PEEYUSH GUPTA, ARTIS(PG)-GIS, ARTIS, NATIONAL MISSION FOR CLEAN GANGA on 30/10/2026 10:12 am

iii. Check Dam System:

Construction of 14 check dams are proposed through the course of the river Rind. The details of the check dams are given at Annexure -II. A schematic diagram of the check dam is presented in figure 10.

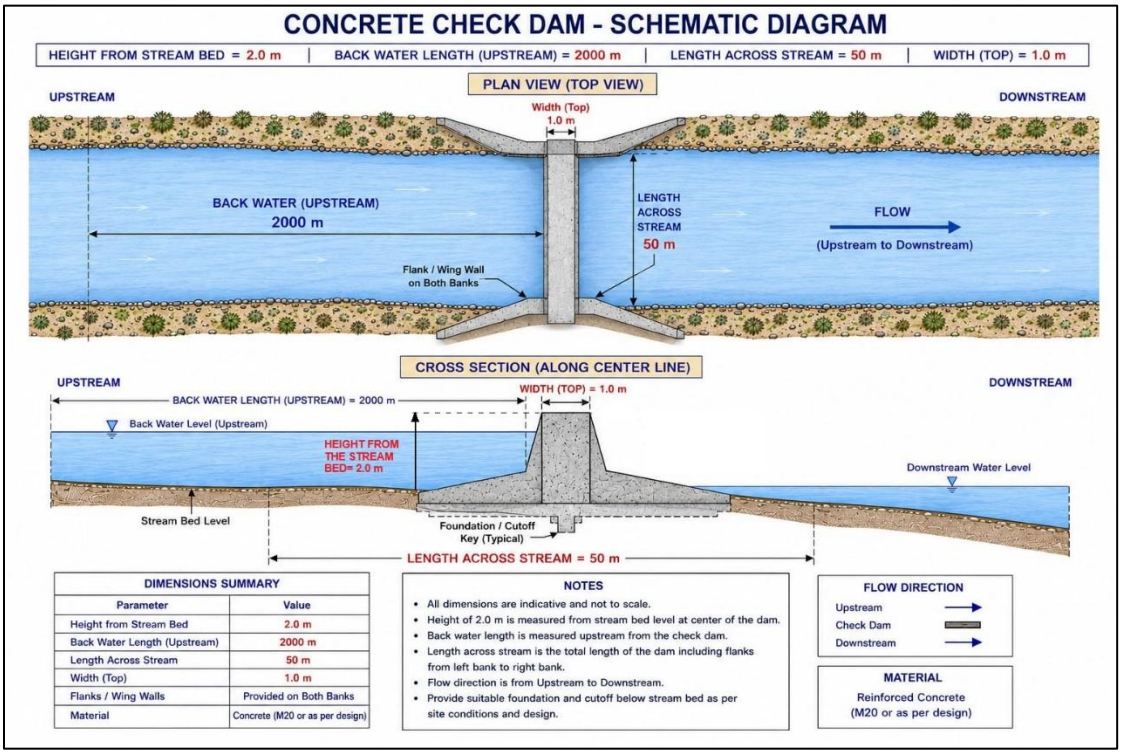

Fig. 10: Schematic diagram of Check Dam for ground water recharge

9. Conclusion:

As per Annexure -II, 47 suitable recharge structures are proposed for MAR in the proposed area by considering hydrogeological feasibility for recharge to ground water along with suitable type of recharge structures. A detailed engineering design for recharge pits from ponds, foundation depth, spill way etc. for Check dam, needs to be prepared by civil engineer for actual cost estimates. These proposed designs facilitate effective harnessing of runoff, reduce sediment ingress, enhance infiltration and improve groundwater recharge while ensuring ease of maintenance and long-term sustainability of these MAR structures.

ANNEXURE 2:

Details of 47 MAR sites for the proposal of Ponds and Check Dams identified and recommended by CGWB

Details of MAR sites (Ponds) identified and recommended by CGWB													
S.N	**District**	**Block**	**Village Name**	**Location Details**	**Longitude**	**Latitude**	**Land Type (Govt./Pvt.)**	**Accessibility /approachability**	**Ground Water level (mbgl)**	**Renovation/construction of recharge structures**	**Area (sq.m)**	**Storage (MCM)**	**Expected Groundwater Recharge (MCM)**
1	Fatehpur	Haswa	Semri	Gram Samaj Bhumi near the pond loccated near playground and behind the Masjid	80.8965	25.8279	Government	Approachable	15.57	(i) Excavation of the pond up to 2.0 m (ii) Bunding of the pond with the excavated material (iii) Construction of the Recharge shaft adjacent to the pond in Gram Samaj land (iv) Connection of the another pond with the existing pond	18000	0.072	0.0504
2	Fatehpur	Asothar	Harnawa	Adjacent to Mahavir Mandir in Harnawa village near the Gram Samaj Pond; about 100 m from Besandi-Asothar Road.	80.8661	25.7590	Government	Approachable	11.70	(i) Construction of Recharge pit adjacent to the pond near the inlet in Gram Samaj Land (ii) Construction 2 inlets in the pond	4462	0.017848	0.0124936
3	Fatehpur	Haswa	Misa	In the Gram Samaj Land adjacent to Composite School, Misa	80.9270	25.8269	Government	Approachable	16.58	(i) Excavation of the pond up to 1.5m (ii) Bunding of the pond with the excavated material (iii) Construction of the Recharge shaft adjacent to the pond in Gram Samaj land	7300	0.0292	0.02044
4	Fatehpur	Hathgaon	Kamraon	Gram Samaj Bhumi adjacent to the Bridge in Kamraon village	81.0522	25.9043	Government	Approachable	13.81	(i) Excavation of the depressed area and construction of a pond with recharge pit (ii) Rejuvenation of the channel up to 500 m on both upstream and downstream side	33500	0.134	0.0938
5	Fatehpur	Hathgaon	Kasraon	Pond adjacent to Kabristan and near Ambal Baba Mandir, Kasraon	81.0907	25.9193	Government	Approachable	11.95	(i) Construction of Recharge pit (ii) Pond is newly constructed and 4 inlets are also present	42032	0.168128	0.1176896
6	Fatehpur	Bahua	Bahua rural	Government Degree College, Bahua Rural adjacent to the canal. Approach from Bahua-Dattauli Road	80.6169	25.8257	Government	Approachable	11.16	(i) Connection of 2 Rainwater harvesting structures with recharge pit	11608	0.046432	0.0325024

Sir

Please find attached the report on "Verification and Feasibility of Managed Aquifer Recharge Sites Proposed by NGRI Based on Heliborne Survey in the Kaushambi–Fatehpur–Kanpur Region," which has been verified in the field by the officers of CGWB, Northern Region, Lucknow. The report is submitted for your kind information. In this regard, it is requested that a suitable date may kindly be intimated for the presentation of the feasibility report.

Regards
Dr. Fakhre Alam
